

## My Enjoyment Of Nature

Whether with emergence, where the many fine details in the simple design, to multistability, a play on visual aspects of the design, my design philosophy is based on the idea of synergizing with nature.

With my experiences in enjoying nature, I thought of a way to add some love to nature (not complete neo-primitivism, but a way to enjoy nature through works & crafts).

Even in products, I would love to enjoy designs to add a sense of natural tone to the piece, either in the background or foreground.

## My Definition in Design Vocabulary

- **Design Process** - a method where a designer and/or their group create designs through iteration, thinking, sketching, and skills.
- **Design Skills** - a set of abilities a designer can have when designing. There also has to be *soft skills*, where a designer uses their skills that synergizes with others
- **Design Thinking** - a process where the designer thinks of design ideas with their own & past design philosophies and experiences.
- **Design Sketching** - a method where the designer creates some drawings to get an idea of what the design would look like.
- **Design Iteration** - versions of the design that both shows progress of the design and help inspire the designer to improve on their craft.
- **Design Value** - a value in design where it shows ethical & effort in the design
- **Ethical Design** - a form of design that can be inclusive, or appropriate at the time
- **Design Purpose** - the purpose is that to help instruct/tell a message to the intended viewers
